
batch 0: π_0 (sim-trained)
batch 1: π_1
batch 2: π_2
batch K: π_K (converged)
goal g_1
goal g_2
goal g_3
policy update
① ILC step per trial
$\tilde{u}_v = u_v + \Delta u_v$
② replay buffer
$(g_v, \tilde{u}_v) \to \mathcal{D}$
③ refit π_θ on $\mathcal{D}$
$\pi_\theta \to \pi_1$
policy update
① ILC step per trial
$\tilde{u}_v = u_v + \Delta u_v$
② replay buffer
$(g_v, \tilde{u}_v) \to \mathcal{D}$
③ refit π_θ on $\mathcal{D}$
$\pi_\theta \to \pi_2$
flown hop
apex target $h^* \pm 2$ cm
flight speed v vs. target v^*
miss
on target
